PROFILE

Senior full-stack engineer with eight years building enterprise SaaS across Angular and React front ends with Spring Boot and Node.js services. Currently responsible for a multi-tenant ERP/CRM/HRM platform serving 10+ client organisations, 300+ managed employees and over 100,000 end users, where I own the multi-tenant architecture and built the Swiss and EU tax, accounting and payments layer. Previously delivered a hospitality booking platform used by hotel groups across Europe and the Middle East, working in a distributed team across Europe and Nigeria. I work AI-first day to day: LLM APIs integrated into production features, and development inside a coding-agent harness where reviewing the output is the step that carries the risk. Experienced across AWS and Google Cloud, with automated testing and CI/CD as standard practice.

SKILLS

LANGUAGES	TypeScript / JavaScript / Java / PHP / Dart / Python
FRONTEND	Angular / React / Next.js
BACKEND	Spring Boot / Node.js / NestJS / Express.js / REST API design
DATA	PostgreSQL / MySQL / MongoDB / Redis / RabbitMQ
CLOUD & DEVOPS	AWS / Google Cloud Platform / Firebase / Docker / GitLab CI / GitHub Actions / Rancher / CapRover
AI ENGINEERING	LLM API integration / AI coding agents (Claude Code) / AI-assisted development / reviewing AI-generated code
TESTING	Jest / Vitest / Cypress / Playwright
PAYMENTS & TAX	Payrexx / EU and Swiss tax and accounting logic
MOBILE	Flutter / Native Android (Java)
WAYS OF WORKING	Agile/Scrum / Kanban / Code review / Async collaboration
SPOKEN	English (fluent)

EXPERIENCE

Senior Software Engineer (Contract)

Dec 2022 - Present

CHB Technologies Limited

Remote

- Build and maintain a multi-tenant SaaS platform (ERP, CRM, HRM) supporting 10+ client organisations, 300+ managed employees and over 100,000 end users, owning the payroll, accounting and employee-management modules end to end.
- Own the platform's multi-tenant architecture, covering data isolation between client organisations and the service boundaries separating payroll, accounting and CRM domains: a modular core with performance-critical services extracted and deployed independently.
- Re-architected long-running payroll and reporting operations into asynchronous background jobs and queues, removing blocking work from the request path as platform load grew.
- Introduced API versioning and contract standards across services consumed by web and mobile clients, so modules ship independently without breaking existing integrations.
- Integrated Payrexx for Swiss and European payment methods, and implemented EU and Swiss tax and accounting logic across the finance modules.
- Established automated test coverage and CI quality gates on GitLab CI, catching regressions before release.
- Develop inside a coding-agent harness daily, scoping changes tightly and reviewing agent output before it reaches the codebase: the failure mode that matters is a confidently wrong change spread across several files.

Software Consultant

Feb 2022 - Dec 2022

Concurrent Client Engagements

Remote

- **Black Owl Consulting Limited** (Jun - Dec 2022): Advised a tech startup on web and mobile architecture, stack selection and product strategy through to post-launch.
- **CPAAT Consulting Limited** (Feb - Jul 2022): Built and maintained GateHouse access-control software, delivering separate operator and security-personnel workflows.
- **Varroe.com** (Jul - Sep 2022): Delivered a cross-platform multi-vendor marketplace application for Android and iOS, covering vendor onboarding and customer purchase flows.

Software Engineer

Sep 2020 - Feb 2022

All Prime Technologies Limited

Remote (distributed team across Europe and Nigeria)

- Owned the customer-facing booking experience and booking management interface for a hospitality platform used by hotel groups across Europe and the Middle East, reaching millions of end users.
- Contributed to the access-control and ERP system used by hotel administrators and management, working within a cross-border agile team.
- Participated in daily stand-ups, pair programming and code review within a cross-border, multi-timezone delivery model.

Web & Mobile Developer

Jul 2018 - Sep 2020

Self-Employed

Remote

- Delivered web and mobile applications across NGO activity management, estate monitoring, online education (LMS) and a fingerprint-based school security system with backend support, and mentored junior developers in web and mobile practice.
